

IMPROVING DEVICES IN A DOMAIN

5

ABSTRACT

Exemplary embodiments of the present invention include methods for improving the devices in a domain. Such exemplary embodiments often include receiving, within a
10 network, a plurality of device effectiveness records for a first user created in a first domain, storing the plurality of device effectiveness records, identifying an effective device ID for the first user in dependence upon the plurality of device effectiveness records, and notifying a second user in a second domain of the effective device ID. In
15 some embodiments, an effective device ID identifies a new device for the user. In other embodiments, an effective device ID identifies an upgrade for an existing device for the user.
